

Gladiator

Fall 2005

Zep Gladiator Dispenser System

The Gladiator dispenser was designed to handle large, tough crowds in schools, amusement parks, mass transit hubs, recreational facilities, and sports arenas. It is a rare combination of style and durability, with exterior components constructed of stainless steel and anodized aluminum. It can be used in locker rooms, showers, and other humid environments without rusting.

The stainless steel handle may be hand, wrist, or elbow activated, and the dispenser is ADA compliant.

An optional anodized aluminum bottle shield (product #6849) is available for added security where vandalism has been a problem. The shield has a polycarbonate view window that lets you easily determine when the soap bottle is at the replacement level. A hidden key lock secures the shield to the dispenser mounting plate. All dispensers are keyed alike to simplify replacing the soap bottles.

The large, economical 2500 ml bottles ensure that you won't run out of soap during big events. Each bottle dispenses over 4800 shots of rich, foaming hand or shower soap. These bottles will have to be refilled less often than standard size bag soaps, saving time, labor, and packaging waste. You can choose from Mango (087416), Watermelon Soapy Sudz (087616), Lemongrass (088516), or Foam Body Wash (085416). Soaps are packed four per case.

The new Gladiator soaps and dispenser will be available after December 1. For questions about this new system, or to reserve your Gladiators today, call 1-800-972-4937.
